QUOTATION

Book Inventory, Sales & Distribution Management System

Quotation No.	_____	**Date**	_____
Client Name	_____	**Valid Until**	_____
Client Company	_____	**Prepared By**	_____
Client Contact	_____	**Currency**	PKR

1. Project Overview

Development of a web-based Book Inventory, Sales, Purchase, Customer Account, Sample Distribution and Reporting Management System. The application will be deployed locally on the client's network and accessed by authorized users through web browsers.

2. Proposed Technology

Layer	Technology
Frontend	Next.js / React / TypeScript
Backend	Java / Spring Boot REST API
Database	PostgreSQL
Authentication	Role-based user authentication and authorization
Reporting	PDF / Excel / CSV reporting
Deployment	Local LAN deployment – no cloud or Docker required

3. Scope of Work

#	Module	Included Features
1	User Management	Users, roles, permissions, login/session management
2	Books & Publishers	Books, ISBN, editions, categories, publishers and book-publisher mapping
3	Inventory	Opening stock, stock tracking, stock adjustments, stock movements and low-stock monitoring
4	Purchases	Purchase orders/entries, purchase items, publisher payable tracking and payments
5	Sales	Sales invoices, sale items, stock validation, customer accounts, payments and returns
6	Customer Accounts	Customer ledger, receivables, payments and outstanding balances
7	Sample Management	Sample issues, sample stock tracking, sample returns and sample recipient history
8	Sample Budget	Budget allocation, consumption, remaining balance and utilization tracking
9	Accounting	Customer/publisher ledgers, receipts, payments and transaction history
10	Reports	Inventory, sales, purchases, customers, publishers, samples, budget and profit reports
11	Audit & Controls	Transaction history, audit records, cancellation/return controls and stock integrity
12	Deployment	Local server installation, database setup and LAN access configuration

4. Key Business Features

• Inventory will be maintained at Book + Publisher + Edition level.

• Purchases increase stock and create the corresponding publisher payable transaction.

• Sales reduce available stock and create the corresponding customer receivable transaction.

• Samples are tracked separately from sales and do not create sales revenue.

• Sample consumption is deducted from a separately maintained sample budget.

• Historical sale cost will be retained to support accurate gross-profit reporting.

• Stock-changing transactions will be handled through the backend with transaction controls.

• Confirmed financial transactions will not be physically deleted; returns/cancellations will be handled through controlled transactions.

• Reports will support filtering by date, book, publisher, customer and other applicable criteria.

• The system will support two users working simultaneously on the same local network.

5. Deliverables

• Complete web application source code.

• PostgreSQL database schema and migration scripts.

• REST API backend.

• Web-based frontend.

• User and role management.

• Reports and export functionality included in the agreed scope.

• Local LAN deployment and initial configuration.

• Basic deployment and user documentation.

• Initial data/setup assistance as agreed.

6. Project Timeline

Milestone	Estimated Duration
Requirements & Database Finalization	_____ working days
Core Development	_____ working days
Inventory / Purchase / Sales Modules	_____ working days
Sample & Accounting Modules	_____ working days
Reports & Testing	_____ working days
Deployment & Handover	_____ working days
Total Estimated Timeline	_____ working days

7. Commercial Proposal

Description	Amount (PKR)
Software Development	PKR _____
Local Deployment & Initial Configuration	PKR _____
Reports / Customization	PKR _____

Other / Optional Items	PKR _____
Total Project Cost	**PKR** _____

8. Payment Terms

Milestone	Percentage / Amount
Advance Payment	_____ % / PKR _____
Development Milestone	_____ % / PKR _____
UAT / Testing Completion	_____ % / PKR _____
Final Delivery / Handover	_____ % / PKR _____

9. Support & Maintenance

Included Support	Details
Warranty / Bug Fixes	_____ days after final delivery
Maintenance	PKR _____ per month / year (if applicable)
Additional Changes	Quoted separately if outside the agreed scope

10. Assumptions & Exclusions

• The application is intended for local/LAN deployment and the agreed number of users.

• Client will provide the required server/PC, network connectivity and PostgreSQL hosting environment.

• Hardware, operating-system licensing, network equipment and third-party licensing are not included unless explicitly stated.

• Cloud hosting, mobile applications, SMS/email gateways, payment gateways and external integrations are excluded unless specifically added to the quotation.

• Any functionality outside the agreed scope may require a separate quotation.

• Final requirements and acceptance criteria will be confirmed before development of the relevant module.

11. Acceptance & Approval
